|                    | Blair Ball, Director        |
|                    | David Castaldo, Director    |
|                    | Michael Thompson, Director  |

Staff Present:Jeff Davis, General ManagerThomas Todd, Finance ManagerCheryle Rasmussen, Executive AssistantJeff Ferre, General Counsel

Teleconference Location: 3900 So. Las Vegas Blvd, Las Vegas, NV Room 6098

- 1. Call to Order, Flag Salute and Moment of Silence: The meeting of the San Gorgonio Pass Water Agency Board of Directors was called to order by Board President David Fenn at 7:00 p.m., January 17, 2017 in the Agency Boardroom at 1210 Beaumont Avenue, Beaumont, California. Director Duncan led the Pledge of Allegiance to the flag. A quorum was present.
- 2. Statement Regarding Teleconferencing: This section no longer applies as all board members are present.
- 3. Roll Call: Roll call no longer applies; all six board members are present.
- 4. Adoption and Adjustment of Agenda: *President Fenn asked if there were any adjustments to the agenda.* General Manager Davis recommended moving Item 8A to accommodate the guests that are here to receive their resolutions. President Fenn requested that item 8A to take place after item 4. The agenda was adjusted as requested.

### 8. New Business:

A. Consideration of Resolution Nos. 2016-09, 10 and 11 Honoring John Jeter, Bill Dickson and Mary Ann Melleby: President Fenn presented John Jeter, Bill Dickson and Mary Ann Melleby with their own individual resolution honoring each of them for their years of dedicated service with the Agency. President Fenn awarded Mr. Jeter with the gavel that he has been charged with during his tenure as President.

5. Public Comment: President Fenn asked if there were any members of the public that wished to make a public comment on items that are within the jurisdiction of the Agency. There were no other members of the public that wished to comment at this time.

### 6. Consent Calendar:

- A. Approval of the Minutes of the Regular Board Meeting, January 3, 2017
- B. Approval of the Minutes of the Engineering Workshop, January 9, 2017

×75

San Gorgonio Pass Water Agency Board Meeting Minutes January 17, 2017 Page 2

Director Stephenson made a motion, seconded by Director Duncan, to adopt the consent calendar as presented. Motion passed 6-0.

### 7. Reports:

### A. General Manager's Report:

(1) Operations Report: (a) SWP Water Deliveries: The Agency has delivered a total of 850 acre-feet to the Noble Creek Connection, so far this month. (b) DWR has notified SWC of the possibility of spilling in San Luis Reservoir. (c) BCVWD has requested a shut down for a few weeks in order for them to do maintenance to their ponds; the shutdown may take up to a month. (d) The annual maintenance shutdown of EBX will not occur this year in order to take advantage of the current influx of water. (e) DWR will probably make an allocation announcement on Wednesday.

(2) Water Supply Conditions: General Manager Davis reviewed slides of the current precipitation located in the Northern Sierra (217% of average for this date), San Joaquin (217% of average for this date) and Tulare Basin (202% of average for this date). He also reviewed the California snow water content for the North, Central and South; as well as the storage levels for Lake Oroville and San Luis Reservoir. More precipitation has been predicted for this month.

(3) General Agency Updates: (a) SGMA: The Agency application to be a GSA for one square mile of the San Gorgonio Pass sub-basin was accepted by DWR and has been posted on its website. Staff is working with other entities to develop a Memorandum of Understanding to become a GSA for the rest of the San Gorgonio Pass Subbasin, and is in the process of doing the same for the San Timoteo Subbasin. (b) UWMP: A copy of the Agency's Draft 2015 UWMP was sent out to all parties required by law. The UWMP is located on the Agency's website and the legal notice will be published in the newspaper February 3<sup>rd</sup> and February 17<sup>th</sup>. A public hearing will take place on February 21, 2017. Director Castaldo inquired about the status of the Agency's Beaumont Avenue Recharge Facility. General Manager Davis stated that he would bring an update to the Board at the next board meeting.

**B.** General Counsel Report: General Counsel Ferre deferred his report.

**C. Directors Reports: (1) Director Stephenson** reported on the YVWD workshop and South Mesa Water Co. Board meeting. (2) **Director Duncan** reported on the Banning Chamber of Commerce Board meeting. He announced the names of the new board members and stated that he is no longer on its board. He also informed the Board that the Banning Chamber will be holding its Installation Dinner and encouraged the board members to attend. **Director Castaldo** reported on the Beaumont City Council meeting. He stated that Councilmember Mike Lara was appointed to attend all upcoming SGPWA meetings.

### 8. New Business:

**B.** Consideration and Possible Action to approve entering into the Sites Project Authority's Amended and Restated Phase 1 Reservoir Project Agreement: A staff report and a copy of the Sites Project Authority's Amended and Restated Phase 1 Reservoir Project Agreement were included in the agenda packet. General Manager Davis stated that this agreement was reviewed at length during the Engineering workshop. The Board has expressed a desire to participate in this project and voted to participate by purchasing 14,000 acre-feet, of which 4,000 acre-feet would be funded by BCVWD. Of this, the Sites JPA has offered the Agency 7966 acre-feet of Class 1 water and 6034 acre-feet of Class 2 water. This is the official participation agreement. Director Ball made a motion to approve, seconded by Director Castaldo. Motion passed 6-0.

**C.** Interviews of Candidates and Possible Appointment of Director to fill the Board Vacancy – Division 3. A Memorandum from Legal Counsel and copies of letters of interest for the board position were included in the agenda packet. General Counsel Ferre explained that today there are two applicants in attendance for the Board to consider for appointment to the board; Stephen Lehtonen of Banning, and Eric Shaw of Banning. General Counsel Ferre reviewed with the Board the interviewing process. During Mr. Shaw's interview he informed the Board that he is currently serving on the Banning Planning Commission and is committed for another two years. General Counsel Ferre stated that by nature of the law should Mr. Shaw be appointed to the board he would need to forfeit his seat with the Banning Planning Commission. He recommended that Mr. Shaw receive his own legal advice and speak to the City Attorney. Mr. Shaw decided to withdraw his application due to said conflict. Upon closing of the interviews General Counsel Ferre requested from the board members their vote for what candidate they would like to appoint to the Board.

| <u>Roll Vote:</u>   | Lehtonen    | Shaw        |
|---------------------|-------------|-------------|
| Director Stephenson | $\boxtimes$ |             |
| Director Ball       |             | $\boxtimes$ |
| Director Castaldo   | $\boxtimes$ |             |
| Director Duncan     | $\boxtimes$ |             |
| Director Thompson   | $\boxtimes$ |             |
| President Fenn      | $\boxtimes$ |             |

Mr. Lehtonen received 5 votes - Mr. Shaw received 1 vote. Mr. Lehtonen was appointed as the new director for Division 3. General Manager Davis administered the Oath of Office to Director Lehtonen. President Fenn asked Director Lehtonen to take a seat at the board table. He thanked both candidates for their interest in the Agency.

**D.** Consideration and Possible Action to Adopt Resolution No. 2017-01 regarding a Policy for Election of Board Officers. A staff report and a copy of Resolution No. 2017-01 were included in the agenda packet. General Counsel Ferre stated that the Board directed legal counsel to develop a potential policy for rotation of Board officers. He explained the operative components of the resolution. General Manager Davis stated that should a non-board member be named Treasurer or Secretary then the two-year term does not apply. After discussion, Director Duncan made a motion, seconded by Director Castaldo, to adopt Resolution No. 2017-01 as presented. Motion passed 7-0.

**E.** Consideration and Possible Action to Form, and Appoint Members to, Board Committees: President Fenn stated that he had put a lot of thought into this item. He stated that there was previously 9 committees and reduced them to 4 committees. The restructure is as follows:

### Standing Committees:

1) Finance & Budget: This committee to meet monthly prior to Finance & Budget workshop & will review finances & checks written, etc.

- Lenny Stephenson Chair
- Michael Thompson Vice Chair
- Stephen Lehtonen Member

2) Conservation & Education: Chair to determine meeting schedule & work with GM to review previous board actions regarding subject. Discuss items such as public outreach, state of water presentations, sponsorships, etc.

- Michael Thompson- Chair
- Stephen Lehtonen Vice Chair
- Blair Ball Member

3) G.M. Performance Evaluation: Chair to determine meeting schedule. Committee should meet twice a year; perhaps Jan/Feb for mid-year review & again in May, in preparation for full board GM review by July.

- David Castaldo Chair
- Lenny Stephenson Vice Chair
- Ron Duncan Member

### Ad Hoc Committees:

4) Board Handbook: Chair to determine meeting schedule. I would encourage the committee to work quickly to produce a Board of Directors handbook. Committee should meet with Staff to get an idea of how to start the process and review materials already in place.

- Blair Ball Chair
- David Castaldo- Vice Chair
- David Fenn Member

**9. Topics for Future Agendas:** Director Castaldo requested an update on the Beaumont Avenue Recharge Facility. An update on the storage account application with the Beaumont Basin Watermaster was also requested.

### SAN GORGONIO PASS WATER AGENCY INVESTMENT REPORT FY 2016-17 FOR THE SIX MONTHS ENDING ON DECEMBER 31, 2016

Accounting convention defines Current Assets as assets that can be liquidated within 1 year. By this definition, funds invested in Wells Fargo accounts, Bank of Hemet accounts, LAIF and CalTRUST accounts would all be considered Current Assets, or short-term investments.

The Agency categorizes its investments into three groups: Short-Term (can be liquidated or mature in 1 year); Medium-Term (mature in more than 1 year up to 5 years) and Long-Term (mature after 5 years).

For the purposes of this report, a "Hybrid" category is included for investments that can be liquidated in a year, but whose underlying securities may mature in more than one year. LAIF and CalTRUST both fall into this category.

This report includes a summary of cash and investments, and a detail of investments by category. The summary can be compared to the Cash Reconciliation Report. The balance for Time Value Investments could be different, as this report is a snapshot at a specific time of current values, whereas the Cash Reconciliation Report lists carrying values. The detail of investments may not necessarily agree with the summary of cash and investments. This report also includes charts to show graphically the different investment categories, and what they are earning.

### CASH AND INVESTMENT SUMMARY

<sup>26/100</sup> 

### **RESOLUTION NO. 2009-2**

# RESOLUTION OF THE BOARD OF DIRECTORS OF THE SAN GORGONIO PASS WATER AGENCY REVISING A POLICY FOR AGENCY RESERVES

# (RESCINDING RESOLUTION NO. 2007-16)

WHEREAS, this Board is charged with responsibility for providing an imported water supply to customers located within the Agency's boundaries, for the construction, operation, maintenance, repair and replacement of facilities to transport and deliver that water to Agency customers, and for the collection and accumulation of revenues necessary to accomplish these purposes; and

WHEREAS, the implementation of Board policy over a period of many years has resulted in the accumulation of funds to be utilized for a variety of Agency activities and to protect the Agency's customers and taxpayers from the financial impacts of catastrophic events and from fluctuations in Agency expenses; and

WHEREAS, by separate action this Board has created a restricted fund for the deposit and separate accounting of Agency revenues which may be expended only for particular Agency purposes, entitled the "State Water Contract Fund" and

WHEREAS, in addition to the collection and deposit of money into the restricted account, this Board also wishes to provide for the creation of certain unrestricted reserve accounts, and to set forth in writing the Agency's policy regarding the accumulation of reserves, the purposes for which they may be expended, and the levels which the Agency should strive to maintain;

**NOW, THEREFORE, BE IT RESOLVED** that the Board of Directors of the San Gorgonio Pass Water Agency hereby provides for the deposit of revenue into the restricted fund, the creation of certain unrestricted reserve accounts, and the accumulation and administration of reserves in each, as follows:

### 1. Restricted Reserves.

(a) <u>State Water Contract Fund.</u> All revenue collected from taxes levied on real property within the Agency's boundaries to pay amounts due and owing to the State of California Department of Water Resources ("DWR") pursuant to the Agency's contract with the State ("State Water Contract") for participation in the State Water Resources Development System shall be deposited into the State Water Contract Fund. The revenues deposited into the State Water Contract Fund may be utilized only to pay the Agency's financial obligations on the State Water Contract. The Agency shall endeavor to maintain money in the State Water Contract Fund in an amount which is more than the total of the previous year's invoices from DWR, but not more than two and one half times the total of such invoices, so that a reserve may be maintained to absorb temporary increases in charges from DWR, help to stabilize Agency tax rates, and protect against economic conditions which could result in the failure of numerous Agency taxpayers to pay their taxes. The reserves maintained in the State Water

Contract Fund may be invested in the same manner as other Agency funds. Investment earnings thereon as determined by the Agency shall be credited to the State Water Contract Fund and shall be used only to pay State Water Contract obligations.

### 2. Unrestricted Reserves.

(a) <u>Reserve for Operations.</u> A "Reserve for Operations" is hereby created for the Agency, to which the Board may appropriate unrestricted Agency revenues. The Reserve for Operations may be utilized to pay the cost of operating the Agency's general system including unanticipated costs of operations. The Agency shall endeavor to maintain in the Reserve for Operations an amount sufficient to pay for six months of normal operations of the Agency excluding depreciation expense and payments to DWR not to exceed one year of normal operation, as reflected in the annual audit of the Agency presented to the Board each year. However, the funds appropriated to the Reserve for Operations may be accessed at any time for any other Agency purpose, upon approval by the Board. Funds appropriated to the Reserve for Operations may be invested in the same manner as other Agency funds, and the earnings thereon shall be credited to the Agency's General Fund.

(b) <u>Reserve for New Infrastructure.</u> A "Reserve for New Infrastructure" is hereby created for the Agency's general account, to which the Board may appropriate unrestricted Agency revenues. The Reserve for New Infrastructure may be utilized to construct or procure new infrastructure for the Agency; expenditures include but are not limited to transmission and distribution capital assets, buildings, pumping equipment, technical equipment, furniture and fixtures and transportation equipment. The Agency shall endeavor to maintain the Reserve for New Infrastructure in an amount approximately equal to 20% of the original cost of the Agency's physical plant, as reflected in the annual audit of the Agency presented to the Board each year. However, the funds appropriated to the Reserve for New Infrastructure may be accessed at any time for any other Agency purpose, upon approval by the Board. Funds appropriated to the Reserve for New Infrastructure may be invested in the same manner as other Agency funds, and the earnings thereon shall be credited to the Agency's General Fund.

(c) <u>Reserve for Additional Water</u>. A "Reserve for Additional Water" is hereby created to which the Board may appropriate unrestricted Agency revenues. The Reserve for Additional Water may be utilized for the temporary purchase of additional water, to augment the Agency's annual allocation of water pursuant to Table A of the Agency's State Water Contract, and for costs associated with the banking or transfer of any water or water rights purchased by the Agency. The Agency shall endeavor to maintain the Reserve for Additional Water in an amount of at least \$2.5 million as of June 30, 2008, with a goal of increasing this amount at least \$250,000 per year thereafter. This reserve fund is to be augmented by income from the "new water" component of the water rate, to be set by the Board. Funds added to this reserve from the water rates shall 28 / 100 not be used for any purpose other than to purchase new water or water rights. It is anticipated that other funds will also be added to this reserve. The funds initially appropriated to the Reserve for Additional Water (\$2.5 million) and funds from sources other than the water rate may be accessed at any time for any other Agency purpose, upon approval by the Board. Funds appropriated to the Reserve for Additional Water may be invested in the same manner as other Agency funds, and the earnings thereon shall be credited to the Agency's General Fund.

(d) Rate Stabilization Reserve. A "Rate Stabilization Reserve" is hereby created, to which the Board may appropriate unrestricted Agency revenues. The Rate Stabilization Reserve may be utilized to protect Agency ratepayers from temporary increases in the cost of providing water service, such as fluctuations in the cost of energy, for example. The Agency shall endeavor to maintain the Rate Stabilization Reserve in an amount equal to \$150,000, or approximately 150% of the maximum annual revenue shortfall year identified in the February 2, 2009 water rate study. This reserve fund is to be augmented by income from the rate stabilization component of the water rate, to be set by the Board. As the initial \$150,000 allocated to this fund as of February 2, 2009 is augmented by funds from water rates, these initial funds shall be allocated to other reserve funds as needed. Funds added to this reserve from the water rates shall not be used for any purpose other than stabilizing or subsidizing the water rate. However, if at any time the funds accumulated in this reserve fund from the rate stabilization component of the water rate reach the goal of \$150,000, additional funds earmarked for this reserve above \$150,000 shall be allocated to the reserve for new water until such time as the rate stabilization reserve fund is reduced below \$150,000. At that time, revenue from the rate stabilization fund portion of the water rate will again be allocated to the rate stabilization reserve fund until such time as it reaches \$150,000. Funds appropriated to the Rate Stabilization Reserve may be invested in the same manner as other Agency funds, and the earnings thereon shall be credited to the Agency's General Fund.

(e) <u>Reserve for Replacements.</u> A "Reserve for Replacements" is hereby created for the Agency's general account, to which the Board may appropriate unrestricted Agency revenues. The Reserve for Replacements may be utilized to replace the Agency's physical plant, as needed. The Agency shall endeavor to maintain the Reserve for Replacements an amount approximately equal to the accumulated amount of depreciation of the Agency's physical plant (not including the State Water Project facilities), as reflected in the annual audit of the Agency presented to the Board each year. However, the funds appropriated to the Reserve for Replacements may be accessed at any time for any other Agency purpose, upon approval by the Board. Funds appropriated to the Reserve for Replacements may be invested in the same manner as other Agency funds, and the earnings thereon shall be credited to the Agency's General Fund.

(f) <u>Reserve for Unexpected Legal Expenses</u>. A "Reserve for Unexpected Legal Expenses" is hereby created, to which the Board may appropriate unrestricted Agency revenues. The Reserve may be used to pay unexpected 29/100

legal expenses incurred by the Agency, such as for planned or unplanned litigation, pending litigation, threatened litigation, or other such legal expenses as may be incurred. The Agency shall endeavor to maintain in the Reserve at least \$150,000, not to exceed \$250,000. However, the funds appropriated to the Reserve for Unexpected Legal Expenses may be accessed at any time for any other Agency purpose, upon approval by the Board. Funds appropriated to the Reserve for Unexpected Legal Expenses may be invested in the same manner as other Agency funds, and the earnings thereon shall be credited to the Agency's General Fund.

**3. Additional Reserves.** In addition to the reserves identified above, the Board may approve the creation of such additional accounts, whether temporary or permanent, as the Board deems necessary or appropriate, by amendment to this resolution or by simple motion. In such event, the Board will identify the purposes for which such additional accounts are created, provide guidance as to the amount which the Agency should endeavor to maintain in each such fund or account, and establish the limits and restrictions pertaining thereto.

**4. Annual Reports.** Each quarter the Agency's General Manager shall provide the Board with a report indicating the beginning and ending balance for each of the reserve funds or accounts created pursuant to this resolution and the purposes for which expenditures have been made there from, and shall make recommendations to replenish or augment fund or account balances as appropriate.

**5. Concurrent Adoption of Water Rates Resolution**. This Resolution revising the policy for the accumulation of the Agency Reserves is dependent on the concurrent adoption of Resolution No. 2009-3, which establishes wholesale water rates.

The foregoing resolution was adopted unopposed by voice vote at a regular meeting of the Board of Directors of the San Gorgonio Pass Water Agency on February 2, 2009 with all Directors present.

I certify that this is a true, full and correct copy Resolution 2009-02, approved by the Board of Directors of the San Gorgonio Pass Water Agency at its meeting held on February 2, 2009.

Jeffrey Davis Secretary of the Board

# MEMORANDUM

| TO:   | Board of Directors           |
|-------|------------------------------|
| FROM: | General Manager              |
| RE:   | 2015 Water Conditions Report |
| DATE: | February 6, 2017             |

# Summary:

At the December Engineering workshop, staff reviewed the draft 2015 Water Conditions Report with the Board. This report has now been finalized. Color copies will be available to the Board at the Board meeting; a black and white version is included in the agenda package.

# **Relationship to Strategic Plan:**

The Water Conditions Report is not directly related to the strategic plan.

# **Recommendation:**

Staff recommends that the Board receive and file the final 2015 Water Conditions Report so that staff may post it on the Agency web site and send it out to a distribution list. San Gorgonio Pass Water Agency Annual Report on Water Conditions Reporting Period 2015

- 19. Average TDS at Devil Canyon Afterbay Near San Bernardino 1990-2015

## 41/100

.

# 1.0 Background

The San Gorgonio Pass Water Agency is a State Water Contractor and wholesale water agency that provides imported water to retail water purveyors within its service area, which extends from Calimesa on the west to Cabazon on the east. Its service area covers approximately 228 square miles, most of which is in Riverside County but which includes two small areas in San Bernardino County. One of these is unpopulated, adjoining the San Bernardino National Forest, and the other, in Edgar Canyon south of Oak Glen, includes a few residences owned by the Beaumont Cherry Valley Water District. The service area is depicted on **Figure 1**.

The Agency was created by the San Gorgonio Pass Water Agency Act, passed by the California Legislature in 1961 and signed by Governor Pat Brown on July 12, 1961. The first Board of Directors, appointed by the Riverside County Board of Supervisors, held its initial formal meeting on October 10 of that year. It had previously met briefly on September 22 to elect Ted Silverwood as the first President of the Agency. The area had a population of approximately 21,000 at the time (today it is over 90,000, an increase of over 400%).

The San Gorgonio Pass is an elevated, relatively narrow land mass between the San Bernardino Mountains on the north and the San Jacinto Mountains on the south, connecting the San Bernardino Valley on the west to the Coachella Valley on the east. Both of these valleys are at much lower elevations than the Pass region. The region straddles two large watersheds. The western half of the service area is drained primarily by Little San Gorgonio Creek and Noble Creek, which are tributary to San Timoteo Creek and the Santa Ana River. The eastern half of the service area is drained by the San Gorgonio River, which is tributary to the Whitewater River and is part of the Colorado River Basin. A small portion of the region drains to the San Jacinto River which drains to Lake Elsinore. **Figure 2** depicts the drainage basins and principal streams in the region.

This report, published annually by the Agency in some form for over two decades, is intended to help monitor and make available to the public the quantity and quality of water in local groundwater basins. It is based on the Agency's extensive database as well as data from other sources. It includes data from 2015 as well as historical data, which provide a basis to put the most recent data into historical context.

**Tables 1, 2, and 3** are extraction (production) summaries of groundwater pumping within the Agency's service area, hereinafter referred to as the region. These tables summarize annual production for the past 13 years, and represent the heart of this report. These data were obtained from the State Water Resources Control Board, Division of Water Rights (State Board); local sources; or in some cases estimated by the Agency. The Agency does not independently verify the data. The State Board does not require reporting for well owners who extract less than 25 acre feet per year (about eight million gallons). Also, it is possible that some well owners do not file as required. The data in these tables represent the Agency's best estimate of actual pumping,

based on both actual data and production estimates. Most wells are not metered and therefore data from these wells must be estimated by various means.

The report also includes water quality data from the State Water Project's sampling station at Devil Canyon in San Bernardino. Devil Canyon is the Agency's delivery point for State Water Project water, and the closest sampling station to the region. It is representative of the water that the Agency receives from the State Water Project. The data, summarized in **Table 5**, reflect that the water quality varies from year to year and from month to month. It is primarily a function of water quality conditions in the Sacramento/San Joaquin Delta and of runoff in watersheds tributary to the Delta. That water quality in turn is largely a function of hydrology. In wet years and during wet periods within dry and average years, fresh water from upland rivers drains to the Delta and improves overall water quality.

The water quality constituent of greatest interest to the Agency and other local water agencies is TDS, or total dissolved solids (also known as salinity or salts). Salinity is becoming more heavily regulated by Regional Water Quality Control Boards throughout the State, especially as water agencies around the state implement recycled water systems. In order to maintain reasonable TDS levels in the lower reaches of the Santa Ana watershed (primarily Orange County), the Santa Ana Regional Water Quality Control Board must set standards for TDS at relatively low concentrations in the upper reaches of the watershed, where the western portion of the Agency's service area is located. Salinity is less of an issue in the eastern portion of the region, which is part of the Colorado River watershed and is more sparsely populated. This watershed already has among the highest levels of TDS in the State.

Sewage treatment plant effluent from Beaumont, Yucaipa, and Calimesa is discharged into tributaries to the Santa Ana River and is regulated by the Santa Ana Regional Board; effluent from Banning is currently regulated by the Colorado River Regional Board, though it is likely that the Santa Ana Regional Board may at some time regulate this discharge or portions thereof. This is due to the fact that the City of Banning has plans for a recycled water system, parts of which will overlie a portion of the Santa Ana watershed. While most of the City is in the Colorado Basin, a small portion of it is in the Santa Ana basin.

State legislation passed in 2009 requires more extensive groundwater elevation monitoring in basins throughout the State similar to what the Agency has performed for nearly two decades. The California Department of Water Resources has set up CASGEM (the California Statewide Groundwater Elevation Monitoring system). The Agency has been accepted as the regional monitoring entity for the region. This represents a legislative mandate to perform the groundwater level monitoring that the Agency has performed on its own for many years. The data uploaded by the Agency to the CASGEM system represent a relatively small subset of the Agency's overall groundwater database.

Newer legislation passed in 2014 (the Sustainable Groundwater Management Act or SGMA) requires virtually all groundwater basins in California to be managed sustainably by 2022. This could have a long-term impact on how groundwater basins in the region are managed. A Groundwater Sustainability Plan, or GSP, must be developed for all these basins by 2022.

# 2.0 Water Supply Conditions

There are three principal sources of water within the region—groundwater, which begins as precipitation in the form of rain and snow in the local mountains; imported water from the State Water Project; and recycled wastewater. A fourth source—local runoff of surface water—accounts for a small but important portion of local water resources, primarily in Edgar and Banning Canyons. Even most of this runoff is typically recharged into local groundwater basins where it becomes part of the groundwater supply.

Recycled water from Yucaipa Valley Water District is in use in Calimesa as of the end of 2015. Two other retail water agencies, including the Beaumont Cherry Valley Water District and the City of Banning, have plans to implement recycled water systems in the next few years and have begun planning, designing, and constructing the needed infrastructure for these systems.

## 2.1 Precipitation

Annual precipitation in the Beaumont area since 1900 is shown on **Figure 4.** The long-term mean annual precipitation in Beaumont is approximately 17.3 inches. This figure depicts the variable nature of precipitation. Of the approximately 115 years of records, the precipitation in 50 years has exceeded the average, while 75 years have been relatively dry as compared to the average. The figure shows several periods—1900-1904, 1948-1952, 1960-1965, 1986-1992, 1999-2002, 2005-2009, and 2011-2015—with multiple consecutive dry years. The figure shows that 2007, 2009, 2013, 2014, and 2015 were among the driest on record in Beaumont (and in fact in all of Southern California), while 2010 was one of the wettest and 2011 and 2012 were below normal. The figure indicates that, since 1999, there have been only three years that met or exceeded the long-term average rainfall. In fact, since 2005 there has been only one "wet" year. This is dramatic evidence of the current drought that has persisted in California and the West. Officially, 2015 is the fourth year of a drought, but as can be seen by the data, the sixteen years since 1999 represent a very dry period. Data presented are for Beaumont because the National Weather Service's official weather station in the region is located in Beaumont.

Precipitation is highly variable, both spatially and temporally. The National Weather Service's official station is at an elevation of about 2600 feet. It is highly likely that higher elevations receive more precipitation, including snow, and lower elevations receive relatively less precipitation. In addition, storms, particularly summer storms, can be highly concentrated and impact one area, while another area a mile or two away may get little or no rain. Thus, while the long-term average rainfall may be approximately 17.3 inches in one part of the region, it could easily be an inch or two more or less at other locations in the same region. A rain gauge in Cabazon would almost certainly show a lower average precipitation than a similar gauge in Calimesa. These gauges would show that climatic and hydrologic differences are present even within the region.

Groundwater basins are able to naturally capture and store much, but not all, of the precipitation in wet years. During and after a rainfall event, runoff drains to streams where it runs into creeks and rivers. Some of this will recharge the local groundwater basins. During large storm events,

## 44/100

much of the runoff will flow downstream. In this case, it will either flow from San Timoteo Creek into the Santa Ana River in Redlands, or it will flow from the San Gorgonio River into the Whitewater River in the Coachella Valley. A small portion of runoff from the region flows to the San Jacinto River in Hemet. Cities and water agencies in the region have begun planning how to capture additional stormwater that currently runs down the Santa Ana River to Prado Dam and eventually to the Pacific Ocean.

Stormwater capture represents a potential new source of water to the region. While additional sources of local water are always good for a region, stormwater capture requires a lot of land, and thus has been found to be too expensive for large-scale development in many areas, particularly where land prices are high. Large areas of land are required in order to construct ponds to settle out the particulate matter that accompanies storm flows. Since large storms are not abundant every year, land acquired for large scale stormwater capture would not be used on a consistent basis, and therefore represents a large investment that does not reap benefits every year. A huge benefit in capturing stormwater is the fact that its salinity is very low, and any stormwater captured would improve the water quality of groundwater basins.

## 2.2 State Water Project

The San Gorgonio Pass Water Agency Act was signed by Governor Pat Brown in 1961, and the first Board of Directors, appointed by the Riverside County Board of Supervisors, held its initial meeting in September of that year. Within another year, the Agency had signed a contract with the State of California for 15,000 acre feet of water from what at the time was known as the Feather River Project. A year later, the Agency increased its contract amount, or Table A amount, to 17,300 acre feet, an increase of 15%. The Agency's Board of Directors fought hard to get this additional amount, and made financial sacrifices to do so. The additional water increased the annual amount of debt service owed by the Agency, and the expenditure of these additional funds precluded the ability to begin construction on a pipeline to San Bernardino to take delivery of the water at that time.

The Agency began importing State Water Project water into the region in 2003, when Phase 1 of the East Branch Extension of the California Aqueduct was completed. Since that time, deliveries of State Water Project water within the region increased steadily until the current drought took hold. **Table 4** summarizes these deliveries. This table shows that the Agency delivered nearly 11,000 acre-feet in 2011 and 2012, dropping to less than 10,000 acre-feet in 2013, to just over 5,000 acre-feet in 2014, and under 4,000 acre-feet in 2015. The 80% allocation of Table A water in 2011 was the highest since 2006, and enabled the Agency to deliver water that not only met local water demands, but that added to local banked groundwater as well. Even though the 35% allocation of water in 2012 was considerably less, the Agency was able to deliver virtually the same amount as in 2011 due to its ability to carry over water from the previous year. This number dropped in 2013 as the Agency had less carryover water to deliver. The 5% allocation in 2014 was one of the lowest on record, and reflects the state of the current drought.

The Table A allocation is a function of hydraulic conditions in the Sacramento/San Joaquin delta as well as northern California hydrology. The average long-term reliability of the State Water Project is approximately 60%. For the Agency, this represents a long-term annual supply of approximately 10,400 acre-feet, nearly 7,000 acre-feet less than its contracted amount. And, this

reliability is expected to decrease over time for a number of reasons. This points out the importance of being able to store water in those years when the Table A allocation is greater than 60%. The ability to import and store more water locally in wet years in the future will be a key to the sustainability of the region and to minimizing the amount of additional supplemental water that must be procured to meet projected water demands.

Currently, the Agency can import a maximum of approximately 11,000 acre feet per year with existing infrastructure. When Phase 2 of the East Branch Extension is completed in early 2017, the Agency will be able to import its entire Table A allocation when it is available, plus additional supplies. Completion of this \$250 million project is a high priority for the Agency, the San Bernardino Valley Municipal Water District (Valley District), and the California Department of Water Resources, the Agency's partners in this project.

Phase 2 of the project (named EBX 2) consists of a pipeline under the Santa Ana River near Highland, a reservoir and pump station in Mentone, and a pipeline from this pump station to the existing Crafton Hills Pump Station in Mentone. The project also includes new pumps in the Crafton Hills Pump Station and the Cherry Valley Pump Station. The new pipeline, which will be 72-inches and 66-inches in diameter, will replace an existing 48-inch diameter line under the Santa Ana River that was constructed in the 1980's. In addition, the Agency and Valley District have recently constructed improvements to the existing EBX that make it more reliable and able to deliver water in the event Crafton Hills Reservoir is out of service. These improvements include an expansion of Crafton Hills Reservoir from approximately 90 acre-feet to approximately 135 acre-feet, and a bypass line around the reservoir that can be used to deliver water when the reservoir is out of service for any reason.

The ability to import and store more water in the region will depend on these projects, additional connection capacity to the East Branch Extension, and additional regional recharge and storage capacity. As of 2015, the total turnout capacity of the pipeline is 20 cfs. The current pipeline capacity is 16 cfs. When EBX 2 goes online in 2017, the total pipeline capacity will be 32 cfs, expandable to 64 cfs. However, unless additional infrastructure is constructed to be able to convey this additional water out of the pipeline to new or existing recharge or treatment facilities, the project will not add appreciably to the region's water resources.

The Agency is currently planning such infrastructure. The Beaumont Avenue Recharge Facility includes a new connection to the EBX, a new recharge facility, and a short pipeline connecting the two. The Agency is moving forward on this project and plans to have it on-line by 2017 or 2018, just after EBX 2 is expected to be completed. The facility will enable the region to import additional water in wet years and store it for dry years. This "conjunctive use" of water is an effective water management tool that is used throughout the West, and whose use is increasing.

In addition, the Agency is considering purchasing capacity in the Valley District's proposed Bunker Hill Conjunctive Use Project, which would enable the Agency to store water in the Bunker Hill Basin in San Bernardino and deliver it to retail water agencies such as the Yucaipa Valley Water District and the South Mesa Water Company in dry years.

## 2.3 Wastewater

Three public agencies, plus one Native American tribe, discharge treated wastewater in the region—the cities of Beaumont and Banning, the Yucaipa Valley Water District, and the Morongo Band of Mission Indians. The annual discharges since 1987 for the three public sewage treatment entities are shown on **Figure 5**. Figures for the Morongo plant are not included. Unlike precipitation and the State Water Project, which are highly variable from year to year, wastewater discharges from the region have consistently increased over time, as the region has developed. They have been relatively constant over the past five years. Wastewater treatment plant discharges are a function of indoor water use, not hydrology or exterior water use. Hence they are considered to be relatively more reliable and stable than imported water or local runoff or stormwater.

Thus, treated wastewater, or recycled water, is an important asset to the region, because it can be a reliable, non-potable water source in the future. All three of the public agencies mentioned above are in various stages of implementing recycled and/or non-potable water systems for irrigation, golf courses, parks, medians, etc., or to recharge it into local groundwater basins. The Yucaipa Valley Water District will receive its permit to deliver recycled water in 2016.

As mentioned in Section 1.0, salinity is a growing concern in California, and recycled water is high in dissolved solids or salinity. While recycled water is a huge potential benefit to the region, its use as a water supply will require desalting. Desalting is an expensive operation that requires brine disposal, a costly process. The Yucaipa Valley Water District has constructed a desalination plant and brine disposal pipeline. Once this is permitted, it will be able to utilize recycled water in lieu of groundwater or imported water for non-potable uses, primarily irrigation and construction water.

The City of Banning is moving towards a recycled water system, and the City of Beaumont, which owns a sewage treatment plan, and the Beaumont Cherry Valley Water District, which is the water purveyor in the City and surrounding areas, are in talks to distribute the City's treated effluent as part of a recycled water system owned by BCVWD. Beaumont Cherry Valley Water District is also discussing construction of a joint pipeline with the Yucaipa Valley District that would enable the two agencies to eventually move recycled water from one area to the other as needed.

Use of recycled water either for direct non-potable use or for recharge requires a permit from the Santa Ana Regional Water Quality Control Board. Such permits will be granted only when the Regional Board is convinced that the permit holder will take all required steps to meet its standards for salinity and other constituents based on its current Basin Plan.

# 3.0 Groundwater Conditions

**Figure 3** shows the principal groundwater basins, sometimes referred to as storage units, in the region. The boundaries of these basins are as defined by the United States Geological Survey. It should be noted that these basins are different from the groundwater basins identified by the California Department of Water Resources in its Bulletin 118. The Beaumont Basin is the largest and most productive of these local basins, and serves a large majority of the population in the region. By the Bulletin 118 definition, the Beaumont Basin is partly in the San Timoteo Subbasin of the Santa Ana Basin and partly in the San Gorgonio Pass Sub-basin of the Coachella Valley Basin.

The region is characterized by numerous faults, which make for complex geology. The Beaumont Basin is characterized by a number of smaller sub-basins, but can be viewed as one continuous basin, or storage unit, and has been modeled in that manner. East of the Beaumont Basin is the Banning Basin, and east of that is the Cabazon Basin. The Agency is in the process of expanding its model of the Beaumont Basin (developed by the United States Geologic Survey) eastward to include both the Banning and Cabazon basins, or storage units. This work should be completed and peer-reviewed by 2016.

The existing model is a tool that can be used to predict how various recharge scenarios will impact water levels in the Beaumont Basin.

As the Sustainable Groundwater Management Act (SGMA) is implemented by the Department of Water Resources, the Agency will place great emphasis on participating in Groundwater Sustainability Agencies (GSA's) for each of the basins within the Agency's service area. This will unfold over the next few years, with creation of all GSA's required by June 2017.

## 3.1 Groundwater Extractions (Production)

Table 1 summarizes groundwater production from the eleven basins in the region. Table 2 summarizes reported production from each individual producer, whether public or private. Table 3 provides a detailed breakdown of extractions by each reporting producer (including some based in San Bernardino County) for each basin for the thirteen most recent years of available data. Surface diversions from the Whitewater River are not included, as the Agency is not convinced the available data are reliable enough to report. These diversions serve the Banning Bench and the City of Banning.

**Figure 6** illustrates the long-term trend in reported groundwater production in the region since 1947. **Figure 7** summarizes the same data since 1997, about the time significant growth started. Both figures show a distinct increasing trend in groundwater extractions both over the long term and over the past 18 years, though 2015 clearly breaks that trend. The results of these recent years show a sharp reduction in local extractions from 2008 to 2010, followed by gradual increases over the next four years, in contrast to decades of increases prior to 2008. Perhaps the

#### 48/100

most striking element of these figures is the sharp decline in production in 2015, also characterized in Tables 1, 2, and 3.

**Figure 6** indicates that extractions remained relatively constant from the early 1960's to the mid 1980's. Extractions increased gradually from that point until the mid-1990's, when they started to increase significantly. **Figure 7** shows a significant increase from 1998 to 2007 (from less than 25,000 AF to over 35,000 AF, an increase of over 40%), and a significant decrease since that time, from over 35,000 AF to just under 31,000 AF in 2014 and just under 23,000 AF in 2015 (a decrease of about 36% over 8 years).

**Figure 8** illustrates the percentage share for each basin's total production within the region in 2015. This is slightly different from the 2014 percentages, with the primary change being a reduction in the Beaumont Basin from 59% to 57%, and a corresponding increase in the Banning Canyon Basin from 9% to 11%. In 2012, the Beaumont Basin represented only 48% of all extractions, compared to 54% in 2013 and 57% in 2015. This increase was primarily at the expense of the Banning Canyon Basin (decreased from 14% to 11%), the Banning Bench Basin (decreased from 6% to 3%), and Edgar Canyon (reduced from 11% to 7%). The Beaumont Basin is the largest basin by far, with over half of all production. The Banning Canyon, Banning, and Edgar Canyon basins are next. The Banning Canyon Basin is fed largely by runoff from an interbasin transfer, the flows of which have been greatly reduced during the current drought. With smaller, shallower runoff-fed basins yielding less water, purveyors must make up the difference with more water from larger basins. This is reflected in the increased dependence on the Beaumont Basin, with its yield increasing from less than half to nearly 60% of all production in three drought years.

**Table 1** indicates that total production in the region decreased about 25% from 2014 to 2015, from 30,671 to 22,835 acre-feet. Compared to the peak year of 2007, when production totaled 35,474 acre-feet, this represents a 36% reduction in groundwater production over the past seven years, with most of this decrease coming in one year—2015. It should be noted that, in 2015, the State Water Resources Control Board implemented mandatory water conservation measures throughout the State. This was the primary reason for the large decrease in production from 2014 to 2015.

In the Beaumont Basin, the region's largest, production decreased about 28%, from 17,970 to 12,954 acre-feet. This confirms the ability of local residents to conserve water when required. As can be seen from Table 3, most of this decrease can be attributed to reduced extractions from three retail water purveyors, Beaumont Cherry Valley Water District (a decrease of over 2600 acre-feet), the City of Banning (a decrease of about 850 acre-feet), and the Yucaipa Valley Water District (a decrease of nearly 1100 acre-feet).

The Cabazon Basin presents an interesting data set. According to the data submitted to the Agency, extractions from this basin decreased by approximately 55% from 2007 to 2012, yet increased by over 80% in 2013 and decreased by 12% in 2014 and another 18% in 2015. These numbers lead to a question of whether the data are correct every year, especially in 2012, when the data showed extractions of 654 acre-feet, compared to 900 acre-feet in 2011 and 1226 acre-feet in 2013. In verbal discussions with the General Manager of the Cabazon Water District,

there was an indication that these numbers are in fact correct, and reflect a rapidly decreasing demand for a number of years, followed by an increase in demand when the outlet malls expanded and began taking water deliveries from the District. The 12% reduction in production from 2013 to 2014 is not readily explained, while the 18% decrease from 2014 to 2015 is readily explained by the aforementioned water conservation regulations.

**Table 2** summarizes overall production by owner, regardless of basin. In reviewing the production by the major water agencies and overliers, the data are relatively consistent, with most owners showing decreases in production, with only a few exceptions. One of the few increases in production is from Robertson's Ready Mix, an increase from 293 to 322 AF, or about 10%. However this represents a small fraction of overall production. Beaumont Cherry Valley Water District decreased its production by 2,671 acre-feet, a decrease of 20%. Banning decreased its production by 1,746 acre-feet, a decrease of about 21%. The Morongo Band of Mission Indians, which owns the Tukwet Canyon golf course, decreased production by 427 acrefeet, a decrease of 21%.

An examination of the groundwater production data demonstrates that, overall, economic conditions and annual precipitation and temperature play large roles in determining water demand in any given year. The gradual increase in water production in the region over the four years previous to this past year can be explained in large measure by a gradually recovering economy, which causes higher water use. Per capita reductions in water use in homes over the three years prior to that could be explained either by cutbacks due to economic conditions during that time, reduced usage due to higher water rates, or water conservation efforts on the part of local residents. A detailed study would have to be performed to determine the specific impacts of these issues on the reduction in water demand during that three year period.

The reduction in production due to decreased water demand from 2008 to 2010, and especially the dramatic drop in 2015, point out a major issue within the water industry. As water demand falls, water sales revenues fall, making it difficult for water agencies to meet financial obligations, especially fixed costs. Most of their costs (primarily labor) are fixed and do not decrease when water demand falls. These agencies have to make up for these lost revenues in other ways, either by changing their rate structures, by increasing water rates, by reducing their costs, or by drawing from reserves. Over the past several years, water districts throughout California have gradually begun implementing tiered rate structures, which charge a higher rate for more water use.

Review of the data for 2015 clearly shows that mandatory water conservation measures trump all other factors in determining water use. Residents of the San Gorgonio Pass significantly decreased their water use in 2015 in response to the Governor's Executive Order and its implementation by the State Water Resources Control Board. The Agency will monitor this in future years to see if the conservation ethic remains a trend, even when the drought ends.

## 3.2 State of Overdraft

Overdraft of a groundwater basin refers to the amount of water pumped out in excess of its safe yield. Safe yield is the average annual replenishment of a basin through natural sources such as

rainfall, runoff, snowmelt, and underflows from other groundwater basins. Safe yield is difficult to establish and represents only an average. In a given year, natural replenishment of a groundwater basin could be more or less than the average safe yield, depending on local hydrology. As a basin changes, for example through development, or as its management changes, the safe yield can also change.

The Agency has been closely monitoring overdraft of the Beaumont Basin since at least 1988, when the Agency's first engineering investigation of the basin indicated that pumping significantly exceeded the basin's probable safe yield. Studies by the Agency have pointed to an estimated long-term average safe yield of about 5,000 to 6,100 acre feet per year for the Beaumont Basin (Boyle Engineering, 1995; Boyle Engineering, 2002). This is smaller than the safe yield of 8,650 acre feet defined in the Beaumont Basin Stipulated Judgment, a number which represents the sum of overlier water rights. Overlier water rights refer to rights based on historical production for water used on the land.

Thus, current and future pumping from the Beaumont Basin, even if in accordance with the Judgment, could exceed the long-term average safe yield of the basin as identified in Boyle. The Judgment includes a clause enabling a party to challenge the determinations of the Judgment ("seek judicial relief") if that party demonstrates harm from the consequences of the Judgment (if pumping activities of others "constitute an unreasonable interference with the complaining party's ability to extract groundwater").

In order to remedy the possibility of long-term overdraft, the Judgment requires the Beaumont Basin Watermaster to "redetermine" the safe yield of the basin at least once every ten years, beginning ten years after the date of entry of the Judgment (no later than February 2014). If the redetermined safe yield were to be different from the 8,650 acre feet per year identified in the Judgment, it would change the amount of overdraft on an annual basis. Depending on the redetermined safe yield, this could be more or less than the current overdraft.

In April 2015, the Watermaster adopted a resolution determining the safe yield to be 6,700 acrefeet per year, after having hired a consultant to model the basin. This is very close to the Agency's earlier estimate of 6,100 acre-feet per year. This has broad-ranging implications for the future, as it means that less water will be able to be pumped out of the basin each year. However it also means that the Basin will be more sustainable in the long term, which will serve the region well.

According to the Judgment, the basin must be in balance after 2014. That is, the total amount pumped out cannot exceed the average safe yield as identified by the Watermaster unless it is drawn out of storage accounts already in place at that time, or replenished from additional sources, including State Water Project water, recycled water, stormwater, or some other source.

Total production in 2015 from the basin, as reported, was 12,954 acre feet. Therefore, the Beaumont Basin experienced an apparent overdraft of about 6,854 acre feet, assuming an average safe yield of 6,100 acre feet. This was partially offset by importing 3,930 acre-feet of supplemental water. This is the second time in five years that the volume pumped out of the basin significantly exceeded the sum of average natural recharge plus imported water. This is another impact of the drought on local water resources. This "apparent" overdraft was in fact not a true overdraft, as the excess production came out of storage accounts. That is, water that was

previously purchased from the Agency and added to basin storage through recharge was drawn out of storage, thus not counting against the safe yield.

Selecting 1997 as a base year (the year when significant increases in production began in the region), the cumulative overdraft in the Beaumont Basin since that time (assuming a safe yield of 6,100 acre feet) would be 154,600 acre feet, an average of approximately 9,000 acre feet per year over the past 17 years, without importation of State Water Project water. Figure 9a depicts this graphically. Through 2015, the Agency has imported over 71,000 acre-feet of supplemental water. This offsets the cumulative overdraft and reduces it to less than 90,000 acre-feet over the same time period. This is depicted in Figure 9b. The difference in these two figures shows the immense impact that the State Water Project has had on the region in the last decade.

Although other local groundwater basins are at similar risk of overdraft, the state of the overdraft of the Beaumont Basin is far more apparent (in part because it has been studied more) and, due to the large population served by the basin, more critical to the region. Since the safe yields of other basins in the region have not yet been defined, it is impossible to determine whether or not they are in overdraft at this time. However, monitoring of water levels in these basins shows that levels are decreasing in at least some of the eleven basins in the region.

The Agency is continuing studies of the Cabazon Basin and at some point in the next few years will likely define an average safe yield for this basin. It is estimated that this is the second largest basin in the region based on storage volume. Other basins will require additional studies over time to better understand their geology and hydrology. It is believed that most of them have storage volumes and safe yields far smaller than the Beaumont and Cabazon basins.

With the advent of the Sustainable Groundwater Management Act, passed by the Legislature in 2014, management of groundwater basins in California will change significantly. Virtually all basins will be required to be managed sustainably by 2022. This means that a plan must be in place to ensure that each basin is in long-term balance. Each plan must detail a method for implementing this, either through reductions in production or through artificial recharge (recharge of the basin with non-native water, recycled water, or stormwater), or both.

## 3.3 Groundwater Levels

The Agency monitors water levels in a large monitoring well network. Currently there are approximately 110 wells in the system, each of which is monitored for groundwater elevation twice a year, typically in May and November. The monitoring network is depicted in **Figure 10**.

Between Fall 2014 and Fall 2015, approximately 80 of the wells had water level changes, including a number of sites with multiple wells. Of these, seven sites had wells that recorded a water level increase of more than five feet, 13 recorded a decline of more than five feet, and 60 recorded little or no change. Of the seven wells showing a large increase in water levels, approximately 4 are in the Beaumont Basin, while one is in the Banning Canyon Basin. Of the 13 wells showing declines of more than five feet, five of them are in the Beaumont Basin, one in the San Timoteo, four are in the Cabazon, and three in the Banning Bench Basin. These are depicted on **Figure 11**.

As of 2011, the Agency is part of the California State Groundwater Elevation Monitoring (CASGEM) system. This is a formal statewide groundwater monitoring system initiated through 2009 legislation. The Agency is a formal monitoring entity for two basins—the San Timoteo sub-basin and the San Gorgonio sub-basin—which roughly correspond to the Agency's boundaries. The state uses different basin names because it views the statewide geology and hydrology on a larger scale, and aggregates smaller basins into larger ones. What is known in the CASGEM system as the San Timoteo sub-basin is essentially the Beaumont Basin, the Singleton Basin, the South Beaumont Basin, and the San Timoteo Basin, and what CASGEM labels the San Gorgonio sub-basin is essentially the Cabazon Basin, the Banning Bench Basin, the Banning Canyon Basin, the Banning Basin, and the Millard Canyon Basin. While the boundaries are not exact, they are similar. The Agency files water level data for selected wells through the Department of Water Resources into the CASGEM database. These data are available on the CASGEM web site.

**Figures 12 through 17** show time-series groundwater elevations (hydrographs) for selected wells in five different basins within the Agency service area. In general, these same wells have been depicted in this report for the past several years.

The two wells shown in **Figure 12** are Banning production wells in the Banning Basin. Each shows great variability in groundwater elevation from 2002 to 2006. Both of these wells show a long-term trend of lower groundwater levels. However, both appear to be relatively stable over the past few years. The well depicted in **Figure 12a** appears to be holding at a water level between 350 and 400 feet below ground surface. The well in **Figure 12b** is down about 75 feet since 1998, but appears to be stable at approximately 350 feet below ground surface.

The five wells depicted in **Figures 13-15** are in the Beaumont Basin. The wells in **Figures 13b** and **15b** are in the same location, approximately 1000 feet east of Beaumont Avenue and 50 feet south of Cherry Valley Boulevard in Cherry Valley. This location is likely influenced by the past recharge at Little San Gorgonio Creek, and possibly by the recharge at Noble Creek. The upturn in water levels from 2008 to 2014 indicates that this is quite likely the case. The downturn since that time could be attributed to the fact that no water has been recharged at Little San Gorgonio during that time, or possibly to the ongoing drought. The well in **Figure 13a** is on the Oak Valley Golf Course. After a steady drop over at least a decade, the water surface appears to be stabilizing over the past two years. This may be due to reduced production from Oak Valley Partners and/or Oak Valley Management, as indicated in **Table 2**.

The wells in **Figures 14 and 15a** are on Calimesa Boulevard near the western edge of the Beaumont Basin. These wells show continually falling water levels over the past decade and a half. That portion of the Beaumont Basin would appear to not be influenced as yet by the ongoing recharge efforts and reduced production. While it is clear that ongoing recharge and reduced extractions have had an impact on at least some of the wells in the Beaumont Basin, water levels at other wells are still falling.

The two wells in **Figure 16** are both in the Cabazon Basin. The well in **Figure 16a** is a production well of the Mission Springs Water District, while the well in **Figure 16b** is a former production well currently used as a monitoring well in the Jensen area of South Cabazon. Both

### 53/100

show severe drops in water surface elevation over the past 15 years. The well in **Figure 16a** shows a drop of more than 15 feet over the past ten years. The well in **Figure 16b** is changed from previous reports. Previously this report depicted the Cabazon Water District's Well Number 1. However, this well has become difficult if not impossible to monitor. Thus the change to the Jensen well. This well shows a drop of approximately 20 feet over the past eight years. These data would seem to indicate that, even though the wells are several miles away from each other, that water levels in the Cabazon Basin are dropping and have been for a number of years. This is somewhat surprising, given the decline in extractions from this basin over the past several years. This could mean that inflows to the basin have also declined over the same period of time. It could mean that any impact of reduced extractions just requires a longer period of time before the impact is seen in wells. It certainly means that there are other factors at work in this basin that impact water surface elevations that are beyond the scope of this report.

This is one reason that the Agency has worked with the United States Geological Survey to extend its model of the Beaumont Basin to the Cabazon Basin. The Agency wishes to learn more about the Cabazon Basin and how it reacts to various hydrologic events. The basin is an important regional resource as a water supply source and storage reservoir and the Agency is trying to better understand the detailed workings of it.

The wells depicted in **Figure 17** are in the Calimesa and Banning Canyon Basins. The data in **Figure 17b** show clearly that the Banning Canyon Basin is a shallow basin, and that water levels fluctuate more in such basins. The year 2006 was a wet one locally, and the figure shows that groundwater levels in the basin came up nearly 15 feet that year. The next three years, on the other hand, were dry ones, and the water level dropped nearly seven feet in that time. The data for the well in the Calimesa Basin show that groundwater levels increased in 2006 and have remained relatively constant since, with a slight downward trend. This could have to do with the Yucaipa Valley Water District's filtration plant, which came online in 2006. This event reduced extractions from the Calimesa Basin and likely contributed to the stabilization of the water level.

These figures represent only a small portion of all groundwater elevation data available in the region. These data indicate that, in general, groundwater elevations continue to decline except in certain areas where recharge of imported water or the switch to surface water is apparently stabilizing or even raising the water levels. Reductions in extractions over the past six years have in many cases slowed the rate of decline.

The implications of lower water levels are great. As water levels decline throughout the local basins, every well will have to pump water from a lower elevation, thus increasing power costs for well owners and rate payers. Some overliers' wells may be quite shallow, and as water levels decline further some of these wells may be in danger of going dry. This would necessitate a large expense to the overlier—either a new well, a deeper well, or connection to one of the water purveyors' systems.

In general, continually decreasing water levels can also lead to land subsidence (sinking) and the drying up of traditional wetlands or streambeds. In the region, most of these wet areas dried up many years ago. The Beaumont Basin Watermaster is charged with monitoring land elevations

## 54/100

to determine if subsidence is occurring in the Beaumont Basin. As of this time, the Watermaster has not reported any appreciable land subsidence over the basin.

The Sustainable Groundwater Management Act (SGMA) will require Groundwater Sustainability Plans (GSP's) for all medium and high priority groundwater basins in California by 2022, with sustainability to be reached within 20 years after that time. According to the California Department of Water Resources, there are only two basins in the Agency's service area—not 11, as reported herein. DWR's data are collected at a much higher level. It remains to be seen how SGMA may impact long-term groundwater levels, though it is likely that they will stabilize over the next two decades. This report will continue to monitor water levels in part to determine if implementation of these GSP's will impact all wells, or some fraction thereof.

# 4.0 Water Quality

### 4.1 State Water Project

The Agency takes delivery of its State Water Project water at the Devil Canyon hydroelectric facility in San Bernardino and conveys it through the East Branch Extension to various delivery points. Water quality is a very important component of the Agency's supplemental water supply program.

**Table 5** shows six common constituents and their measured monthly concentrations from the SWP system at Devil Canyon over the past four years. TDS, or total dissolved solids, is perhaps the most significant constituent in this table. It represents salinity, which is becoming more important to water agencies in California. It can be seen that TDS was mostly below 300 parts per million (ppm) or milligrams per liter (mg/l) through 2013. In 2014, the third consecutive year of drought, a number of readings above 300 appear; this is to be expected in dry years. This continued in 2015, another dry year, as the monthly average was above 300 every month that year. Many readings from 2011 through 2013 are in the 240-250 ppm range, and there are a number of readings in the 220 range and below. In 2011, which was a relatively wet year in northern California, TDS readings were very low after January. This is significant because the ambient salinity concentration of the Beaumont Basin is approximately 280 ppm, so the great majority of the time, importation of SWP water reduces the overall concentration of salinity in the Beaumont basin.

**Figure 18** shows the monthly average salinity concentration at Devil Canyon since 2004, while **Figure 19** shows the annual average since 1990. **Table 5** and **Figure 18** clearly show an outlier salinity concentration that is likely the result of an incorrect reading or analysis. The annual average shown in Figure 19 is useful because it indicates clearly that salinity is higher in dry years and lower in wet years. The two highest years, 1991 and 1992, were very dry and the last two years of a five year drought in California. The years 1996, 1997, 1998, 2006, and 2011 were all very wet years (in the case of 2011, it was a wet year in northern California, where State Water Project water originates). Salinity in 2010 is significantly lower than the previous three years, which represented a three year drought in California. This inverse correlation between salinity and rainfall comes about because State Water Project water passes through the Sacramento/San Joaquin delta. In dry years, there is less fresh water available to flush out the system by pushing relatively more saline water to the ocean, so the fresh water/salt water interface is higher in the delta and hence salinity of SWP water is higher.

These figures also point out why it is advantageous to take more water in wet years when it is available—the water has a lower salinity in those years. In the long term, water quality (from a salinity standpoint) is helped by hydrology, as more water is typically delivered in wet years when salinity is lower, and less water is delivered in dry years when salinity is higher.

#### 4.2 Groundwater

The Santa Ana Regional Water Quality Control Board's Basin Plan has a maximum benefit goal of 330 ppm of salinity for the Beaumont Management Zone, which includes the Beaumont Basin. The current ambient salinity concentration is the Beaumont basin is approximately 280 ppm. The Basin Plan requires local entities to begin planning desalters when the ambient TDS concentration increases to 320 ppm or if other conditions are met. These desalters must be online within seven years after that time.

Groundwater quality in the region is very high. There is no known historical industrial or mining activity in the region that has generated harmful plumes of pollutants. In addition to salinity or TDS, nitrate is the only other constituent that needs to be monitored closely. This too is regulated by the Regional Board, but nitrate concentrations are currently well within the maximum benefit standards. Over the past few years there have been isolated incidents of high nitrates at individual wells for short periods of time, typically after a large rainstorm that causes flushing of the system. However these have not proven to be a health hazard.

Nitrates in ambient groundwater do not necessarily translate to a danger in drinking water. Nitrates in drinking water are regulated by the California Department of Public Health, not the Regional Board. Nitrates in groundwater can effectively be managed if needed through dilution. If nitrates were to become a persistent problem in a particular location, the local purveyor may consider installing wellhead treatment for nitrates. Such treatment is costly. However, there is no evidence that such treatment is needed in the region in the near future.

It should be noted that salinity in drinking water is regulated by a secondary water quality standard, while nitrate is regulated under a primary standard. Primary standards are for constituents that can directly impact human health. Secondary standards are for constituents that do not directly impact human health, but that may have aesthetic issues. Salinity is not harmful to human health and safety directly, while nitrate can be harmful at high concentrations, particularly to infants.

In 2013, the California Department of Public Health changed the maximum contaminant level (MCL) for chromium 6 in drinking water, lowering the standard. Because of this change in the standard, several wells in the region suddenly became unusable, as they produced water with chrome 6 that met the previous MCL, but not the new one. Chrome 6 is a naturally occurring contaminant that is present at some level in many areas of California, including the San Gorgonio Pass. Because of the more stringent standard, some wells owned by the City of Banning and the Beaumont Cherry Valley Water District were temporarily taken out of service, pending implementation of a fix to the problem. This water quality issue has had an impact on water supplies in the region, as those wells are now not able to produce potable water for those two purveyors. Those entities are currently taking steps to ensure that all drinking water served meets this more stringent standard, and plan to meet the State's timeline for doing so, thus ensuring that drinking water meets all water quality standards.

## 4.3 Emerging Contaminants

There is a relatively new class of chemical constituents that has recently been found in the environment and in drinking water known as emerging contaminants. These are primarily

## 57/100

pharmaceuticals and personal care products (PPCP's) that pass through human or animal bodies or get flushed and end up in sewage or septic flows. They have become known because of the technological ability to measure concentrations at increasingly smaller concentrations (parts per billion or even parts per trillion). Because of their presence in the environment, the Santa Ana Regional Water Quality Control Board has required that dischargers (those entities that own and operate sewage treatment plants) monitor for these constituents on an annual basis.

There is no evidence that these constituents are harmful to humans in their current concentrations in the environment. Some groups have claimed that these products could harm animals in the environment and thus have called for their regulation. At this point in time they are not regulated. Water agencies in the watershed are developing a database so that the number and concentrations of these constituents can be monitored on an ongoing basis.

Emerging contaminants are mentioned in this report not because they have any immediate impact on water quality in the region, or even that they are expected to have an impact in the near future. They are included because they are mentioned increasingly in the literature and by regulators as a growing issue for the water industry to be aware of.

# 5.0 SUMMARY

Reported groundwater extractions within the region decreased significantly in 2015, following four consecutive years of slight increases. Total extractions in 2015 were down nearly 25% from 2014, or 36% below levels for 2007, the peak historical year for extractions in the region. This is likely due to water conservation regulations imposed by the State Water Resources Control Board.

Local retail water purveyors continue to make progress in implementing recycled water systems. These systems are complex and expensive to complete, and funding and water quality (salinity) are key issues that require attention. Implementation of these systems over the next few years should reduce groundwater extractions significantly. Such reductions should begin 2016, when the Yucaipa Valley Water District is expected to receive a permit to deliver recycled water. The Regional Water Quality Control Board has adopted a Basin Plan Amendment which will have an impact on the proposed recycled systems by changing water quality rules.

Another factor leading to reduced withdrawals is the reduction in the safe yield of the Beaumont Basin, as published by the Beaumont Basin Watermaster in early 2015.

Based on data in this report, there is evidence that groundwater levels have increased slightly in portions of the region over the past three to four years. In other areas, the rate of groundwater decline has slowed. At the same time, groundwater levels continue to drop in some areas within the region. Future reports will determine the significance of these data. Lower groundwater levels in shallow basins in dry years is not a long-term concern; however, continued falling groundwater levels in larger, deeper basins would be cause for concern.

The Sustainable Groundwater Management Act, passed by the Legislature and signed by Governor Brown in 2014, will require virtually all groundwater basins in California to have a plan to be managed sustainably by 2022.

Over the past six to eight years, retail water agencies in the region have done a very good job of managing local water resources. The Yucaipa Valley Water District has built a surface water treatment plant in order to reduce its groundwater withdrawals, and also a desalter and brine line to facilitate use of recycled water for nonpotable uses. The Beaumont Cherry Valley Water District has constructed a recharge facility in the Beaumont Basin and has purchased a large quantity of replenishment water from the Agency. The City of Banning has purchased water for replenishment as well, and is working with Southern California Edison, the Banning Heights Mutual Water Company, and the Agency to make improvements to a system that delivers runoff from the San Bernardino Mountains to the Banning Bench and the City of Banning. High Valleys Water District has replaced much of its old, leaky pipe, thus reducing its water losses significantly. The Cabazon Water District has also reduced its water losses significantly. The South Mesa Water Company has drilled a new, more efficient well. Several water purveyors have implemented tiered rate structures, which tend to reduce water usage. Three major recycled

water systems are in the planning, design, or construction phase. These are all positive steps that will help extend and preserve local groundwater basins into the future.

During this same time period, the Agency has increased its imported water deliveries to such an extent that, in three of the past five years, more water was put into the Beaumont Basin than withdrawn from it. A three-year string was broken in 2014 and 2015 due to the fact that less water was available from the State Water Project. Since the completion of Phase I of the East Branch Extension in 2003, the Agency has increased its deliveries to the region every year, with the exception of 2005, 2013, 2014, and 2015 (the latter three being dry years). Overall, the Agency has delivered approximately 71,000 acre feet of State Water Project water over the past twelve years, either for replenishment, overdraft mitigation, or direct deliveries.

In the future, the local economy and local weather patterns will continue to play large roles in determining water demands each year. As new homes are constructed in the future, recent legislation will require lower water use landscaping. This should reduce per capita water consumption for future development, further extending the life of local water resources. Production data for 2015 bear this out.

Based on data in this report and observation of ongoing events, it is apparent that the recession is slowly coming to an end, and construction of new homes in the region will begin within the next 1-2 years, thereby increasing water demands. The Agency and retail water purveyors will need to work together to continue to meet the increasing water demands of the region.

A newly adopted MCL for chrome 6 has had a negative impact on local groundwater supplies. Purveyors impacted by this will have to determine how to address this issue so that these supplies may be brought back online or replaced with other sources.

## MEMORANDUM

| TO:   | Board of Directors   |
|-------|--|
| FROM: | Staff and General Counsel  |
| RE:   | Consideration and possible action to rescind or revise<br>Resolution No. 2014-02 |
| DATE: | February 6, 2017   |

## **Recommendations:**

1. Adopt Resolution No. 2017-02, thereby rescinding Resolution No. 2014-02; or

2. Take action to adopt a revised version of Resolution No. 2014-02.

If the Board takes no action, then Resolution No. 2014-02 remains in effect.

## Background:

On February 18, 2014, the Board adopted Resolution No. 2014-02 which established a policy for meeting future water demands. Resolution No. 2014-02 provides, among other things, that the Agency is prepared to take the necessary actions to meet the water supply needs of the region. The resolution further provides that nothing in that resolution shall limit or impact the authority of the Board to adopt future policies.

At the Engineering Workshop on January 9, 2017, the Board discussed Resolution No. 2014-02. The discussion included the potential for that resolution to be misinterpreted as creating a new right for third parties, or imposing an obligation on the Agency which would go beyond the Agency's authority as set forth in the Agency Act.

ż.

Following that discussion, it was requested by a Director that this matter be placed on this Agenda in order to provide for the potential action to rescind Resolution No. 2014-02. In order to address comments from other Board members at the same meeting, the option to revise said resolution is also being provided. The Board is not required to take any action and in that case, Resolution No. 2014-02 will remain in effect.

#### **RESOLUTION NO. 2014-02**

## A RESOLUTION OF THE SAN GORGONIO PASS WATER AGENCY ESTABLISHING A POLICY FOR MEETING FUTURE WATER DEMANDS

WHEREAS, the San Gorgonio Pass Water Agency ("Agency") is a state water contractor that was formed with the purpose of importing water from the State Water Project ("SWP") into the San Gorgonio Pass area in 1961. The Agency's service area encompasses approximately 228 square miles and includes the Cities of Beaumont, Calimesa, and Banning, as well as the unincorporated areas of Cherry Valley, Cabazon, Poppet Flat, Banning Bench, and San Timoteo and Live Oak Canyons; and

WHEREAS, the mission of the Agency is to import water and to protect and enhance local water supplies for use by present and future water users and to sell imported water to local water agencies within the Agency's service area. The Agency is able to import water from sources that provide the highest quality and the most cost effective price, including the SWP and other potential sources. The Agency also works with local retail agencies to manage local and regional water resources in a sustainable manner designed to manage overdraft within the Agency's service area; and

WHEREAS, the Agency has a contract with the California Department of Water Resources for 17,300 acre-feet of SWP water which is used to supplement local demands including eliminating groundwater overdraft. Information and reports obtained by the Agency, including but not limited to, the Agency's 2010 Urban Water Management Plan, indicate that said amount of SWP water will likely not be sufficient to meet all future supplemental water demands within the Agency's service area. The Agency has the responsibility to manage the present and future water supply needs for all users within its jurisdiction. Increased demand from new growth and decreasing reliability will continue to present challenges to the Agency's ability to deliver wholesale water on a reliable basis. In addition, the Agency has made substantial investments in facilities and infrastructure to bring said supplies to the region and to store and deliver said supplies. Said facilities include pipelines, pump stations, turnouts, reservoirs and spreading grounds; and

WHEREAS, the Board of Directors of the Agency desires to adopt this Resolution in order to establish a policy which will work toward the goal of meeting future water demands in the region.

NOW, THEREFORE, BE IT RESOLVED BY THE BOARD OF DIRECTORS OF THE SAN GORGONIO PASS WATER AGENCY AS FOLLOWS:

1. <u>Incorporation of Recitals</u> All of the foregoing Recitals are true and correct and the Board so finds and determines. The Recitals set forth above are incorporated herein and made an operative part of this Resolution.

2, <u>Definitions</u> The types of water rights, supplies and resources which are subject to this Resolution and the policy set forth herein include, but are not limited to, the following:

(a) Carryover Water - Water belonging to a State Water Contractor that is not used in a given calendar year and thus is carried over to the next year for use in that year or in a future year.

(b) Dry Year Yield Water - Water made available in a dry year for that year only, typically from a farming interest, irrigation district or other type of agency providing service to farming interests.

(c) Exchange Water - Water obtained from another water agency in exchange for a promise of water at a subsequent time such as in a future month or future year. An exchange may be a one-to-one exchange or an exchange with a different ratio.

(d) Long-Term Water Rights - Water rights owned by another entity which is willing to sell the rights to the water and not just a water supply. Long-Term Water Rights are frequently defined as

lasting as long as the State Water Project.

(e) Short-Term Water - Water available under certain conditions in any given year or for a limited number of years for a defined period only.

(f) Spot Water - Water available in any given year for that year only.

(g) Transfer Water - Water transferred from one area of the state to another through the actions of public agencies.

3. <u>Regional Water Management</u>

ς.

(a) <u>Meeting The Water Supply Needs Of The Region</u> - The Agency is prepared to take the necessary actions to provide its service area with adequate supplies of water to meet expanding and increasing needs in the years ahead. As additional water resources are required to meet increasing needs, the Agency will be prepared to take the necessary actions to deliver such supplies.

(b) <u>Funding And Construction Of Facilities</u> - Taxpayers and water users residing within the Agency's service area already have obligated themselves for the construction of a supply and distribution system. This system has been designed and constructed, and future facilities will be designed and constructed, in a manner to deliver the Agency's full share of SWP water, as well as water from other sources as may be required in the years ahead.

(c) <u>Acquiring Supplemental Water Supplies</u> – The Agency is prepared to take the necessary actions to meet the water supply needs of the region. For example, and not by way of limitation, the Agency is authorized to pursue the acquisition of Short-Term Water, Spot Water, Dry Year Yield Water, and Long-Term Water Rights. The Board of Directors of the Agency has the discretion to reasonably determine the timing and other details of acquiring such supplies, and will also manage the Agency's current supplies to maximum effect, as determined in the Board's direction. In order to meet this commitment, the Agency has the discretion to reasonably determine which type of water source to pursue including, but not limited to, Carryover Water, one-year or multi-year Exchange Water, Transfers, or other purchases of water or water rights.

4. <u>Consideration Of A Wheeling Request</u> The Agency will consider "wheeling" water to the region subject to the terms of this Resolution, Agency wheeling policies, applicable law, and upon payment of the applicable charge. In the event of any such wheeling, the Agency's facilities, including its rights to use SWP facilities, may be used to transport water not owned or controlled by the Agency to a retail agency or other public or private entity within the Agency's service area.

5. <u>Potential For Future Policies Regarding Water Supplies</u> Nothing in this Resolution shall limit or otherwise impact the authority of the Board to adopt future policies regarding water supplies including, but not limited to, any potential water shortage plans that the Board may deem to be necessary in order to establish how the Agency will allocate deliveries of water to local retail agencies during single and multiple dry years where the total amount of annual orders from local retail agencies exceeds the amount of SWP water available in that calendar year or years.

6. <u>Controlling Effect</u> All ordinances, resolutions, minute orders, or administrative actions by the Board of Directors, or parts thereof, that are inconsistent with any provision of this Resolution are hereby superseded only to the extent of such inconsistency.

7. <u>CEQA Compliance</u> - The Board finds that the establishment of a policy for meeting future water demands constitutes general policy and procedure making and also constitutes organizational or administrative activities that will not result in direct or indirect physical changes in the environment. Based on this finding, the Board determines that the establishment of a policy for meeting future water demands, by way of adoption of this Resolution, is exempt from the requirements of the California Environmental Quality Act pursuant to section 15378(b)(2) and (5) of the State CEQA Guidelines.

8. <u>Effective Date</u> - The President of the Board shall sign this Resolution and the Secretary of the Board shall attest thereto, and this Resolution shall be in full force and effect immediately upon adoption.

9. <u>Severability</u> - If any section, subsection, clause or phrase in this Resolution is for any reason held invalid, the validity of the remainder of this Resolution shall not be affected thereby. The Board hereby declares that it would have passed this Resolution and each section, subsection, sentence, clause, or phrase thereof, irrespective of the fact that one or more sections, subsections, sentences, clauses or phrases or the application thereof be held invalid.

**ADOPTED AND APPROVED** this 18th day of February, 2014.

President, Beard of Directors San Gorgonio Pass Water Agency

ATTEST:

Secretary, Board of Directors San Gorgonio Pass Water Agency

#### **RESOLUTION NO. 2017-02**

### **RESOLUTION OF THE SAN GORGONIO PASS** WATER AGENCY RESCINDING RESOLUTION NO. 2014-02

WHEREAS, the San Gorgonio Pass Water Agency ("Agency") is a state water contractor formed under special act legislation set forth in the Water Code Uncodified Acts, Act 1100 ("Act"); and

WHEREAS, on February 18, 2014, the Board of Directors adopted Resolution No. 2014-02 which established a policy for meeting future water demands. Resolution No. 2014-02 provides, among other things, that the Agency is prepared to take the necessary actions to meet the water supply needs of the region. Resolution 2014-02 further provides that nothing in that resolution shall limit or otherwise impact the authority of the Board to adopt future policies; and

WHEREAS, questions and concerns have been raised regarding the potential for Resolution No. 2017-01 to be misinterpreted as creating a new right for third parties, or imposing an obligation on the Agency, which would go beyond the Agency's rights and obligations as set forth in the Act; and

WHEREAS, since the Agency already has the power, by way of the Act, to take the actions mentioned in Resolution No. 2014-02, and in order to avoid misinterpretations, the Board wishes to therefore rescind Resolution No. 2014-02.

NOW, THEREFORE, BE IT RESOLVED BY THE BOARD OF DIRECTORS OF THE SAN GORGONIO PASS WATER AGENCY AS FOLLOWS:

1. <u>Incorporation Of Recitals</u> The Recitals set forth above are incorporated herein and made an operative part of this Resolution.

2. <u>Rescission</u> The Board hereby rescinds, repeals, vacates and sets aside Resolution No. 2014-02 in its entirety.

3. <u>Effective Date</u> - The President of the Board shall sign this Resolution and the Secretary of the Board shall attest thereto, and this Resolution shall be in full force and effect immediately upon adoption.

**ADOPTED AND APPROVED** this 6th day of February, 2017.

President, Board of Directors San Gorgonio Pass Water Agency

ATTEST:

Secretary, Board of Directors

To the San Gorgonio Board of Directors,

On Febraury 18, 2014, a prior Board of Directors of this agency adopted Resolution 2014-2 titled A Resolution Of The San Gorgonio Pass Water Agency Establishing A Water Policy For Meeting Future Water Demands.

There are several statements in this resolution that cause me great concern as a current board member of the agency and I wish to convey them to you, the other directors of this board, for discussion and possible action.

First and foremost, I believe that this resolution is sending the wrong message to the citizens and outside entities who have interests within our jurisdictional boundaries.

For example, in paragraph three of the resolution it states, "The Agency has the responsibility to manage the present and future water supply needs for all users within its jurisdiction".

It further states in item 3. a) "The agency is prepared to take the necessary actions to provide its service area with adequate supplies of water to meet expanding and increasing needs in the years ahead", and again essentially the same statement occurs in item 3. c) "The agency is prepared to take the necessary actions to meet the water supply needs of the region".

In a recent general board meeting of the Beaumont-Cherry Valley Water District (BCVWD) that I and Directors Fenn and Thompson attended, we listened to a discussion between their board and staff and a home builder company's representatives and its attorney. Our Resolution 2014-2 was discussed and in essence their sentiment was that this Agency would "make good" on all their water needs. The above referenced statements of this resolution could easily lead one to this conclusion, especially if this were the only document to be read emanating from this Agency.

In reading the act that created this agency and delineates its powers, I am unable to find any statement to the effect that this "agency has the responsibility to manage the present and future water supply needs for all users within its jurisdiction" as is written in Resolution 2014-2. One definition of manage is to administer. The Pass Agency does not administer the water supply needs for ALL users in our jurisdiction. That is not our role. We have seven customers that we serve and each has their own boards of directors, general managers and staff, general counsels and facilities, etc. Furthermore one cannot effectively manage something over which it has no control. For example we have no control over the weather and the precipitation in this state. We have no real control of laws that are being passed down to us or their consequences. We are not a land planning agency and have virtually no input on how the land will be used with its accompanying water demands. It is damaging for this agency to make statements of this nature when there is no basis for them.

The statements made in the resolution that this agency is "prepared to take the necessary actions to meet the water demands" of the area are equally concerning. One of the first mentioned powers granted by our act is the power to acquire water and water rights. Historically, no board

### 99/100

of this agency has secured any long term water rights and yet in recent years there has been a large increase in water needs in certain areas under our jurisdiction. How is it then that we, the current board, should be compelled to live up to a standard that a prior board, who signed this resolution, unfortunately could not live up to themselves? We need to remember that a prior board cannot bind a current sitting board on issues such as this.

In summary, I believe that Resolution 2014-2 is misunderstood and is being misinterpreted by the uninformed. I also believe that a prior board should not bind a current board and that the usefulness of this resolution has run its course and should be rescinded. This agency cannot be perceived as having the ability to "make good" at the end of the day of others poor choices. We can help them succeed to the best of our abilities but we also have limits on what we can achieve. I believe we have a duty to protect the integrity of this agency and should adhere to the act that created it. In so doing we also protect the citizens we are privileged to serve.

Respectfully submitted,

Director Ball
