

A photograph of a concrete flume structure in a wooded area. Water is flowing through the structure, creating a small waterfall effect. The background is filled with trees and foliage. The text "Flume Update" is overlaid in a large, white, outlined font.

Flume Update

Board of Directors Meeting

8/22/2022

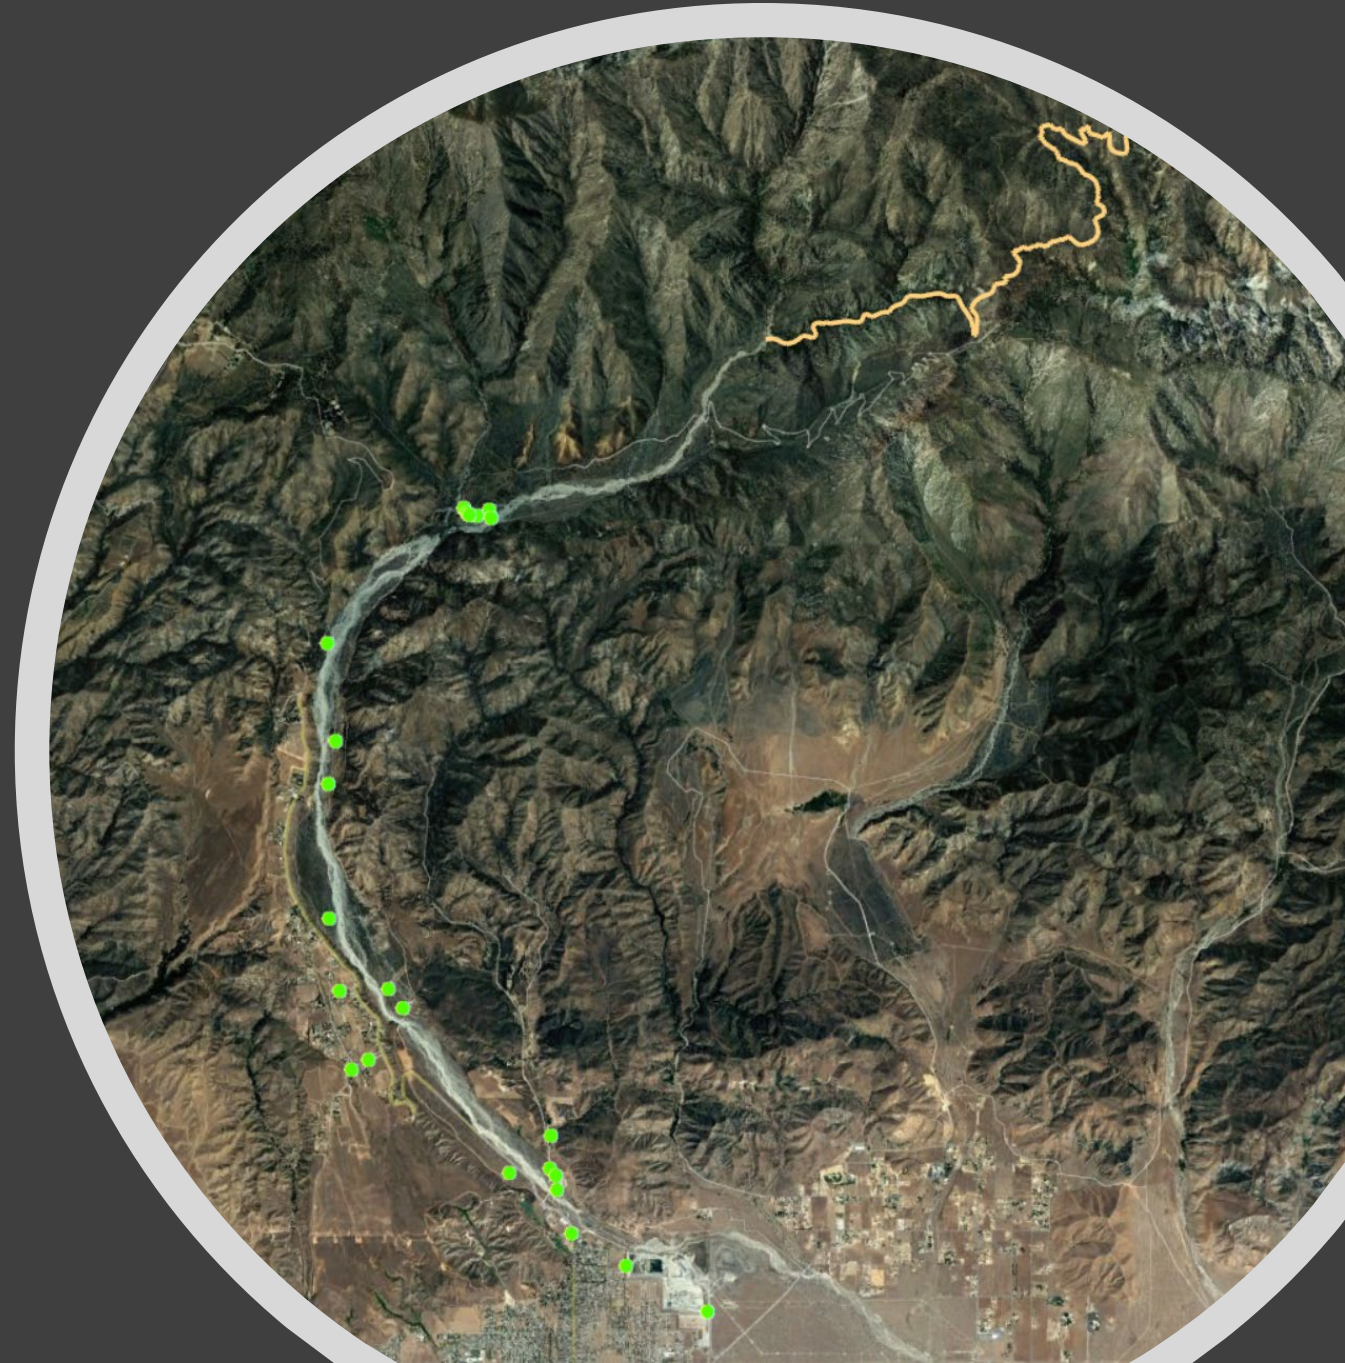

The mountain side was
burned up several years ago

The flume was damaged beyond repair

Banning Heights Mutual Water Company
and the City of Banning operate wells in
the Banning Bench

Whitewater Flume
provides water supply
for the Banning Bench
and the City of Banning

So-Cal Edison is re-building the Whitewater Flume

The current project is from the western flume intake to Burnt Canyon

Instead of installing a concrete/wooden flume, Edison is installing polyethylene pipe

The staging area for the pipe replacement is at Camp Comfort

Road access is limited so helicopters bring supplies

The tanker on the right supplies fuel to the helicopter

There has been recent flash flooding at the mountain making access difficult
